INDEX TO VOLUME 3

Authors

ALLAIS, M. Method of appraising economic prospects of mining exploration over large territories: Algerian Sahara Case Study, 285.

ASHBY, W. ROSS. *An Introduction to Cybernetics:* Book Review, 438.

BAUMOL, WILLIAM J. AND IDE, EDWARD A. Variety in retailing, 93.

BECKMAN, M. Letters to the Editor, 197.

BELLMAN, RICHARD. On the computational solution of linear programming problems involving almost-block-diagonal matrices, 403.

—— Dynamic programming and the smoothing problem, 111.

—— On a dynamic programming approach to the caterer problem–I, 270.

BISHOP, C. E., KING, R. A., AND SUTHERLAND, J. G. Programming resource use and capital investment in agriculture, 173

BOWES, ANNE E. AND GUETZKOW, HAROLD. The development of organizations in a laboratory, 380.

CHARNES, A. AND MILLER, M. H. A model for the optimal programming of railway freight train movements, 74.

CRANDALL, H. W., GARVIN, W. W., JOHN, J. B., AND SPELLMAN, R. A. Applications of linear programming in the oil industry, 407.

CYERT, R. M., AND TRUEBLOOD, ROBERT M. statistical sampling techniques in a department store, 185.

DANTZIG, GEORGE B. AND FERGUSON, ALLEN R. The allocation of aircraft to routes —An example of linear programming under uncertain demand, 45.

—— Thoughts on linear programming and automation, 131.

EISEMANN, KURT. The trim problem, 279.

FERGUSON, ALLEN R. AND DANTZIG, GEORGE B. The allocation of aircraft to routes —An example of linear programming under uncertain demand, 45.

FORD, L. R., JR. AND FULKERSON, D. R. Solving the transportation problem, 24.

FREEMAN, RAOUL J. Ss inventory policy with variable delivery time, 431.

FULKERSON, D. R. AND FORD, L. R., Jr. Solving the transportation problem, 24.

GARVIN, W. W., CRANDALL, H. W., JOHN, J. B., AND SPELLMAN, R. A. Applications of linear programming in the oil industry, 407.

GIBRAT, R. AND MASSE, P. Applications of linear programming to investments in the electric power industry, 149.

GOMBERG, WILLIAM. The use of psychology in industry: A trade union point of view, 438

GORDON, MYRON J. AND SHAPIRO, ELI. Capital equipment analysis: The required rate of profit, 102.

GUETZKOW, HAROLD AND BOWES, ANNE E. The development of organizations in a laboratory, 380.

HELGESON, W. B. AND KWO, T. T. Letters to the Editor, 115.

HOSMER, CLARK L. A proposal for comparing strategic assumptions and capabilities, 167.

IDE, EDWARD A. AND BAUMOL, WILLIAM J. Variety in retailing, 93.

JACOBS, WALTER, Air Force progress in logistics planning, 213.

JOHN, J. B., CRANDALL, H. W., GARVIN, W. W., SPELLMAN, R. A. Applications of linear programming in the oil industry, 407.

JOHNSON, S. M. Sequential production planning over time at minimum cost, 435.

JUNCOSA, M. L. AND KALABA, R. E. Optimal design and utilization of communication networks, 33.

KALABA, R. E. AND JUNCOSA, M. L. Optimal design and utilization of communication networks, 33.

KARUSH, W. AND VAZSONYI, A. Mathematical programming and service scheduling, 140.

KING, R. A., BISHOP, C. E. AND SUTHERLAND, J. G. Programming resource use

and capital investment in agriculture, 173.

KIRCHER, PAUL. Management planning and control—what next?, 1.

KWO, T. T. AND HELGESON, W. B. Letters to the Editor, 115.

MANNE, ALAN S. A note on the Modigliani-Hohn production smoothing model, 371.

MARKOWITZ, HARRY M. The elimination form of the inverse and its application to linear programming, 255.

MASSE, P. AND GIBRAT, R. Applications of linear programming to investments in the electric power industry, 149.

MILLER, M. H. AND CHARNES, A. A model for the optimal programming of railway freight train movements, 74.

MINAS, J. SAYER. Formalism, realism and management science, 9.

MUTH, R. AND BECKMAN, M. Letters to the Editor, 197.

PRAGER, WILLIAM. On the caterer problem, 15.

SALVESON, M. E. Letters to the Editor, 114.

SHAPIRO, ELI AND GORDON, MYRON J. Capital equipment analysis: the required rate of profit, 102.

SPELLMAN, R. A., CRANDALL, H. W., GARVIN, W. W., AND JOHN, J. B. Applications of linear programming in the oil industry, 407.

SUTHERLAND, J. G., BISHOP, C. E. AND KING, R. A. Programming resource use and capital investment in agriculture, 173.

SYMONDS, GIFFORD H. The Institute of Management Sciences: Progress report, 117.

TRUEBLOOD, ROBERT M. AND CYERT, R. M. Statistical sampling techniques in a department store, 185.

VAZSONYI, A. AND KARUSH, W. Mathematical programming and service scheduling, 140.

WAGNER, HARVEY M. A linear programming solution to dynamic Leontief type models, 234.

WEINWURM, ERNEST H. Limitations of the scientific method in management science, 225.

WHITIN, T. M. Letters to the Editor, 196.

Articles

Air force progress in logistics planning. WALTER JACOBS, 213.

Allocation of aircraft to routes—An example of linear programming under uncertain demand. ALLEN R. FERGUSON AND GEORGE B. DANTZIG, 45.

Applications of linear programming in the oil industry. H. W. CRANDALL, J. B. JOHN, R. A. SPELLMAN, W. W. GARVIN, 407.

Applications of linear programming to investments in the electric power industry. P. MASSE AND R. GIBRAT, 149.

Books received, 440.

Book review: An introduction to cybernetics, W. Ross ASHBY, (Martin K. Starr) 438.

Capital equipment analysis: the required rate of profit. MYRON J. GORDON AND ELI SHAPIRO, 102.

Caterer problem, on the. WILLIAM PRAGER, 15.

Computational solution of linear programming problems involving almost-block-diagonal matrices, on the. RICHARD BELLMAN, 403.

Development of organizations in a laboratory, the. HAROLD GUETZKOW AND ANNE E. BOWES, 380

Dynamic programming and the smoothing problem. RICHARD BELLMAN, 111

Dynamic programming approach to the caterer problem, on a-I. RICHARD BELLMAN, 270.

Elimination form of the inverse and its application to linear programming, the. HARRY M. MARKOWITZ, 255.

Formalism, realism and management science. J. SAYER MINAS, 9.

Institute of Management Sciences: Progress report. GIFFORD H. SYMONDS, 117.

Inventory policy with variable delivery time, Ss. RAOUL J. FREEMAN, 431.

Letters to the editor. M. E. SALVESON, 114. W. B. HELGESON AND T. T. KWO, 115. T. M. WHITIN, 196. M. BECKMAN AND R. MUTH, 197.

Limitations of the scientific method in management science. ERNEST H. WEINWURM, 225.

Linear programming solution to dynamic

Leontief type models, A. Harvey M. Wagner, 234.
Management planning and control—What next? Paul Kircher, 1.
Mathematical programming and service scheduling. W. Karush and A. Vazsonyi, 140.
Method of appraising economic prospects of mining exploration over large territories: Algerian Sahara Case Study. M. Allais, 285.
Model for the optimal programming of railway freight train movements, A. A. Charnes and M. H. Miller, 74.
News and Notices: fourth annual international meeting of the Institute of Management Sciences, 198.
Note on the Modigliani-Hohn production smoothing model, A. Alan S. Manne, 371
Optimal design and utilization of communication networks. R. E. Kalaba and M. L. Juncosa, 331.
Programming resource use and capital investment in agriculture. R. A. King, C. E. Bishop and J. G. Sutherland, 173.
Proposal for comparing strategic assumptions and capabilities, A. Clark L. Hosmer, 167.
Report of the third annual international meeting of the Institute of Management Sciences, 199.
Sequential production planning over time at minimum cost. S. M. Johnson, 435.
Solving the transportation problem. L. R. Ford, Jr. and D. R. Fulkerson, 24.
Statistical sampling techniques in a department store. R. M. Cyert and Robert M. Trueblood, 185.
Thoughts on linear programming and automation. George B. Dantzig, 131.
Trim problem, the. Kurt Eisemann, 279.
Use of psychology in industry, the: A trade union point of view. William Gomberg, 348.
Variety in retailing. William J. Baumol and Edward A. Ide, 93.
